### DETAILED ACTION

1. The period for seeking court review of the decision by the Board of Patent Appeals and Interferences rendered July 29, 2004 has expired. The proceedings as to the rejected claims are considered terminated (see 37 CFR 1.197(c)).
2. Pursuant to the Board Decision on Appeal, claims 1-15, 19, 20, 22, 24-44, 47-49, 51, 53-62, 66 and 67 are herein cancelled by Examiner's Amendment, infra (MPEP § 1214.06). Claims 21, 23, 50 and 52 stand allowed. Claims 16-18, 45, 46 and 63-65 are incomplete because they depend from claims that have been cancelled via Examiner's Amendment, infra.
3. Therefore, and further in accordance with MPEP § 1214.06, dependent claims 16-18, 45, 46 and 63-65 will be rewritten in independent format via Examiner's amendment, infra., and will stand allowed.
4. Appellant's Amendment after Board Decision filed October 4, 2004, will not be entered because it amends claims that are subject to cancellation based on Board-affirmed claim rejections and fails to rewrite all the dependent claims with Board-reversed claim rejections in independent format.

### EXAMINER'S AMENDMENT

5. An Examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

6. Cancel claims 1-15, 19, 20, 22, 24-44, 47-49, 51, 53-62, 66 and 67.

7. Replace the text of claims 16, 18, 45, 63 and 65 as follows:

**Rewrite Claim 16 as follows:**

A method for automatically routing an integrated circuit, the method comprising the computer-implemented steps of:

receiving integrated circuit layout data that defines a set of two or more integrated circuit devices to be included in the integrated circuit;

receiving integrated circuit connection data that specifies one or more electrical connections to be made between the integrated circuit devices;

determining, based upon the integrated circuit layout data and the integrated circuit connection data, a set of one or more routing indicators that specify a set of one or more preferable intermediate routing locations through which a routing path is to be located to connect first and second integrated circuit devices from the set of two or more integrated circuit devices;

determining, based upon the integrated circuit layout data, the integrated circuit connection data and the set of one or more routing indicators, the routing path between the first and second integrated circuit devices, wherein the routing path satisfies specified design criteria, and wherein determining the routing path between the first and second integrated circuit devices includes performing one or more design rule checks on one or more portions of the routing path as the routing path is being determined; and
